Overview

Out of all the terms used by the payments industry, perhaps none is as confusing as the difference between a *payment gateway* and a *payment processor*.

Gateway or Processor?

A **Payment Gateway** is what your donor sees when they make a contribution. Donors input their personal information, credit card, or banking details into the *Payment Gateway*, which securely transfers the information to and from a *Payment Processor*. Gateways also will show a Donor if their contribution was approved or denied.

The Donation Process, simplified:

A **Payment Processor** is the piece of technology that moves the secure (or “encrypted”) donor data to and from the bank. First, it checks the donor’s bank to see if there are sufficient funds for the transaction. It then facilitates the process known as settlement, meaning the funds are moved from the donor’s bank account to your bank account, usually within 1-3 business days.
